Basis for Conclusions on IAS 12 *Income Taxes*

This Basis for Conclusions accompanies, but is not part of, IAS 12.

Introduction

- BC1 When IAS 12 *Income Taxes* was issued by the International Accounting Standards Committee in 1996 to replace the previous IAS 12 *Accounting for Taxes on Income* (issued in July 1979), the Standard was not accompanied by a Basis for Conclusions. This Basis for Conclusions is not comprehensive. It summarises only the International Accounting Standards Board's considerations in making the amendments to IAS 12 contained in *Deferred Tax: Recovery of Underlying Assets* issued in December 2010. Individual Board members gave greater weight to some factors than to others.
- BC2 The Board amended IAS 12 to address an issue that arises when entities apply the measurement principle in IAS 12 to temporary differences relating to investment properties that are measured using the fair value model in IAS 40 *Investment Property*.
- BC3 In March 2009 the Board published an exposure draft, *Income Tax* (the 2009 exposure draft), proposing a new IFRS to replace IAS 12. In the 2009 exposure draft, the Board addressed this issue as part of a broad proposal relating to the determination of tax basis. In October 2009 the Board decided not to proceed with the proposals in the 2009 exposure draft and announced that, together with the US Financial Accounting Standards Board, it aimed to conduct a fundamental review of the accounting for income tax in the future. In the meantime, the Board would address specific significant current practice issues.
- BC4 In September 2010 the Board published proposals for addressing one of those practice issues in an exposure draft *Deferred Tax: Recovery of Underlying Assets* with a 60-day comment period. Although that is shorter than the Board's normal 120-day comment period, the Board concluded that this was justified because the amendments were straightforward and the exposure draft was short. In addition, the amendments were addressing a problem that existed in practice and needed to be solved as soon as possible. The Board considered the comments it received on the exposure draft and in December 2010 issued the amendments to IAS 12. The Board intends to address other practice issues arising from IAS 12 in due course, when other priorities on its agenda permit this.

Recovery of revalued non-depreciable assets

- BC5 In December 2010, the Board incorporated in paragraph 51B of IAS 12 the consensus previously contained in SIC Interpretation 21 *Income Taxes—Recovery of Revalued Non-Depreciable Assets*. However, because paragraph 51C addresses investment property carried at fair value, the Board excluded such assets from the scope of paragraph 51B. Paragraphs BC6 and BC7 set out the basis that the Standing Interpretations Committee (SIC) gave for the conclusions it reached in developing the consensus expressed in SIC-21.
- BC6 The SIC noted that the *Framework for the Preparation and Presentation of Financial Statements*¹ stated that an entity recognises an asset if it is probable that the future economic benefits associated with the asset will flow to the entity. Generally, those future economic benefits will be derived (and therefore the carrying amount of an asset will be recovered) through sale, through use, or through use and subsequent sale. Recognition of depreciation implies that the carrying amount of a depreciable asset is expected to be recovered through use to the extent of its depreciable amount, and through sale at its residual value. Consistently with this, the carrying amount of a non-depreciable asset, such as land having an unlimited life, will be recovered only through sale. In other words, because the asset is not depreciated, no part of its carrying amount is expected to be recovered (ie consumed) through use. Deferred taxes associated with the non-depreciable asset reflect the tax consequences of selling the asset.
- BC7 The SIC noted that the expected manner of recovery is not predicated on the basis of measuring the carrying amount of the asset. For example, if the carrying amount of a non-depreciable asset is measured at its value in use, the basis of measurement does not imply that the carrying amount of the asset is expected to be recovered through use, but through its residual value upon ultimate disposal.

¹ IASC's *Framework for the Preparation and Presentation of Financial Statements* was adopted by the IASB in 2001. In September 2010 the IASB replaced the *Framework* with the *Conceptual Framework for Financial Reporting*.

Recovery of investment properties

Reason for the exception

- BC8 IAS 12 applies the principle that the measurement of deferred tax liabilities and deferred tax assets should reflect the tax consequences that would follow from the manner in which the entity expects to recover or settle the carrying amount of its assets and liabilities. In many cases, however, an entity expects to rent out investment property to earn rental income and then sell it to gain from capital appreciation at some point in the future. Without specific plans for disposal of the investment property, it is difficult and subjective to estimate how much of the carrying amount of the investment property will be recovered through cash flows from rental income and how much of it will be recovered through cash flows from selling the asset.
- BC9 It is particularly difficult and subjective to determine the entity's expected manner of recovery for investment property that is measured using the fair value model in IAS 40. In contrast, for investment property that is measured using the cost model in IAS 40, the Board believes that the estimates required for depreciation establish the expected manner of recovery because there is a general presumption that an asset's carrying amount is recovered through use to the extent of the amount subject to depreciation and through sale to the extent of the residual value.
- BC10 To address this issue, the Board introduced an exception to the principle in IAS 12 that applies when an entity adopts an accounting policy of remeasuring investment property at fair value. The purpose of the exception is to reflect the entity's expectation of recovery of the investment property in a practical manner that involves little subjectivity.
- BC11 Many respondents to the exposure draft of September 2010 commented that the Board should develop application guidance rather than creating an exception. The Board could have achieved a similar result in some cases by providing application guidance on how to apply the underlying principle to investment property. However, the Board chose an exception because it is simple, straightforward and can avoid unintended consequences by a strict definition of its scope. In fact, this exception is very similar to application guidance. However, it is technically an exception because, in some cases, the asset's carrying amount is assumed to be recovered entirely through sale even though an entity expects it to be recovered partly through sale and partly through use.
- BC12 The Board also noted that application guidance would not resolve a practice issue that arises when the future income generated from an asset is expected to exceed the carrying amount of that asset and that future income will be subject to two or more different tax regimes. In those situations, IAS 12 provides no basis for determining which tax rate and tax base apply to the recovery of the carrying amount. The Board concluded that the practical way to resolve this issue was to create an exception that determines the manner of recovery of an asset within the scope of that exception.

Scope of the exception

- BC13 The Board understands that the concerns raised in practice relate primarily to investment property measured using the fair value model in IAS 40. The Board proposed in the exposure draft that the exception should also apply to property, plant and equipment or intangible assets measured using the revaluation model in IAS 16 *Property, Plant and Equipment* or IAS 38 *Intangible Assets*. That was because in assessing the difficulty and subjectivity involved in determining the expected manner of recovering the carrying amount of the underlying asset, there is no underlying difference between regularly fair valuing assets through a revaluation accounting policy and applying a fair value measurement model.
- BC14 Many respondents disagreed with the proposal to include property, plant and equipment or intangible assets measured using the revaluation model in IAS 16 or IAS 38 in the scope of the exception. They stated that many items of property, plant and equipment are recovered through use rather than through sale, and that this is consistent with the definition of property, plant and equipment in IAS 16. In addition, many respondents disagreed with the presumption of recovery through sale when the underlying assets are intangible assets for similar reasons. They also warned of unintended consequences that could arise because of the varying nature of intangible assets. Many respondents suggested limiting the scope of the exception to investment properties measured using the fair value model in IAS 40. Having considered those comments, the Board adopted that suggestion.
- BC15 Some respondents supported inclusion of property, plant and equipment in the scope of the exception, including property, plant and equipment measured on a cost basis, because of their concerns about the lack of discounting deferred tax assets and deferred tax liabilities and about a possible double-counting of tax effects (see paragraph BC19). However, the Board concluded that considering concerns about the lack of discounting and about the possible double-counting was outside the limited scope of the amendments.

- BC16 The Board made it clear that the exception also applies on initial measurement of investment property acquired in a business combination if the investment property will subsequently be measured using the fair value model in IAS 40. If the exception did not apply in these circumstances, deferred taxes might reflect the tax consequences of use at the acquisition date, but at a later date reflect the tax consequences of sale. The Board believes that measurement of deferred taxes at the acquisition date should be consistent with the subsequent measurement of the same deferred taxes. For the same reason, the Board concluded that the exception should not apply to investment property initially measured at fair value in a business combination if the entity subsequently uses the cost model.
- BC17 Having considered the responses to the exposure draft, the Board decided not to extend the exception to other underlying assets and liabilities that are measured at fair value, including financial instruments or biological assets. This is because the Board understands that the most significant current practice issues relate to investment property. In addition, the Board wished to avoid unintended consequences of expanding the scope to other assets and liabilities that are measured on a fair value basis.
- BC18 The Board concluded that the amendments should apply to all temporary differences that arise relating to underlying assets within the scope of the exception, not just those separate temporary differences created by the remeasurement of the underlying asset. This is because the unit of account applied in determining the manner of recovery in the Standard is the underlying asset as a whole, not the individual temporary differences.

Measurement basis

- BC19 The Board decided that when the exception applies, there should be a presumption that deferred taxes should be measured to reflect the tax consequences of recovering the carrying amount of the investment property entirely through sale. In making that decision, the Board considered various views expressed by interested parties, which included, but were not limited to the following:
- (a) the tax effect would be double-counted in some situations if deferred taxes are measured on the basis of the tax consequences of use, because the investment property is measured at fair value, which reflects some of these tax consequences; and
 - (b) presuming sale is consistent with a fair value measurement basis that reflects the price that would be received if the investment property is sold.
- BC20 Many respondents to the exposure draft said that choosing a measurement basis of fair value is an accounting policy choice that does not imply or predict recovery of the investment property through sale. Many also said that the proposed exception would solve the double-counting problem partially but not completely. The Board noted that the aim of the exception was neither to link the accounting policy with measurement of deferred taxes (see paragraph BC7), nor to remove completely the double-counting of tax effects (see paragraph BC15). The aim of this exception is to provide a practical approach when determination of the expected manner of recovery is difficult and subjective.
- BC21 In many cases when an entity chooses the fair value model for investment property, investment properties are recovered through sale. Even if an investment property earns income through rental use in a given period, the value of the future earnings capacity of the investment property will often not decrease and that value will ultimately be realised through sale. Therefore, the Board retained its proposal to introduce a presumption of recovery through sale.
- BC22 The Board made that presumption rebuttable because the Board believes that it is not always appropriate to assume the recovery of investment property through sale. The Board initially proposed in the exposure draft that the presumption of recovery through sale is not appropriate when the entity has clear evidence that it will consume the asset's economic benefits throughout its economic life. The Board set a criterion that refers to consumption of the asset's economic benefits, rather than to the recovery of the carrying amount, because the Board understands that there is diverse practice regarding the meaning of the recovery of the carrying amount through use or through sale.
- BC23 After considering the responses to the exposure draft, the Board reworded the rebuttable presumption so that clear evidence would not be required to rebut it. Instead, the presumption is rebutted if an asset is held within a business model whose objective is to consume substantially all of the economic benefits embodied in the investment property over time, rather than through sale. Many respondents were concerned that, because clear evidence is an ambiguous term, the requirement to gather clear evidence would have been onerous for entities that have no problem applying the existing principle in IAS 12, and could have led to abuse by entities that choose whether to gather clear evidence to achieve a favourable result. The Board chose to use the term 'business model' because it is already used in IFRS 9 *Financial Instruments* and would not depend on management's intentions for an individual asset. Many respondents were concerned that the presumption would lead to inappropriate results in some cases because it would not be rebutted if a minor

scrap value would be recovered through sale. The Board also reworded the rebuttable presumption in order to respond to those concerns. The Board also made it clear that the presumption of recovery through sale cannot be rebutted if the asset is non-depreciable because that fact implies that no part of the carrying amount of the asset would be consumed through use (see paragraph BC6).

- BC24 The Board also considered other approaches to the measurement of deferred tax liabilities and deferred tax assets when the exception applies, specifically whether deferred taxes should be measured on the basis of the lower of the tax consequences of recovery through use and through sale. However, the Board rejected such an approach, noting that it would have created:
- (a) conceptual and practical concerns about whether deferred tax assets should be measured to reflect the lower of, or higher of, the tax consequences of use and of sale;
 - (b) a measurement basis that some believe would be arbitrary; and
 - (c) concerns that entities might be required to measure deferred taxes on a basis that is inconsistent with their expectations of recovery of the carrying amount of the underlying asset.
- BC25 Some respondents to the exposure draft drew the mistaken conclusion that the exposure draft required presumption of *immediate* sale at the end of the reporting period when assessing the presumption of recovery through sale. The Board observed that paragraph 47 of IAS 12 requires deferred tax assets and liabilities to be measured at the tax rates that are expected to apply to the period when the asset is realised or the liability is settled on the basis of tax rates (and tax laws) that have been enacted or substantively enacted by the end of the reporting period. This requirement applies even when the presumption of recovery through sale is used. For clarification, the Board adjusted the illustrative example following paragraph 51C to reflect the requirement in paragraph 47.
- BC26 In the exposure draft, the Board proposed to withdraw SIC-21. However, many respondents commented that SIC-21 should be retained in order to avoid unintended consequences. Having considered the responses to the exposure draft, the Board decided to incorporate SIC-21 into IAS 12 in its entirety after excluding from the scope of SIC-21 the investment property subject to the requirement in paragraph 51C.

Assessment of deferred tax assets

- BC27 The Board inserted paragraph 51D to confirm that the requirements in paragraphs 24–33 (deductible temporary differences) and paragraphs 34–36 (unused tax losses and unused tax credits) relating to assessment of deferred tax assets continue to apply even when the presumption of recovery through sale arises. The Board did not think that additional guidance would be necessary.

Disclosure requirement

- BC28 The Board proposed in the exposure draft disclosure of the fact of, and reasons for, the rebuttal of the presumption of recovery through sale if the entity has rebutted the presumption. However, many respondents said that this disclosure would add little or no value to the financial statements. IAS 1 *Presentation of Financial Statements* already requires disclosures regarding material judgements. Thus, there is no need to disclose a particular judgement on specific types of assets. The Board was convinced by those arguments and did not proceed with the proposed disclosure requirement.

The costs and benefits of the amendments to IAS 12

- BC29 Computation of the tax consequences of selling assets is complex in some tax jurisdictions and there are concerns that the amendments to IAS 12 will increase the administrative burden for some entities in those tax jurisdictions.
- BC30 However, the Board believes that the benefit of providing the exception outweighs this potential increase in administrative burden for some entities. This is because the purpose of the exception is to enable preparers to measure deferred taxes in these circumstances in the least subjective manner and in so doing enhance the comparability of financial information about deferred taxes for the benefit of users of financial statements. It is also expected to result in an overall reduction of the administrative burden for entities that have previously had to consider the tax consequence of both use and sale of an investment property when measuring deferred taxes.
- BC31 Many respondents to the exposure draft said that entities would not benefit from the amendments in jurisdictions in which this practice issue did not exist but would suffer from an increased administrative burden as a result of the amendments. Their criticism mainly focused on the rebuttable presumption, as

discussed in paragraphs BC22 and BC23. They also said that the disclosure requirement proposed in the exposure draft would be onerous.

- BC32 After considering the responses to the exposure draft, the Board narrowed the scope of the exception to apply only to investment property carried at fair value. It reworded the rebuttable presumption so that clear evidence would no longer be required to rebut the presumption. The Board also did not pursue the proposed disclosure requirement regarding the fact of, and reason for, the rebuttal. After those changes, the Board believes that the amendments will not be onerous for entities that have previously been able to establish without difficulty how they expect to recover investment property carried at fair value.

Transition and effective date

- BC33 IAS 8 *Accounting Policies, Changes in Accounting Estimates and Errors* requires an entity to apply retrospectively a change in accounting policy resulting from the initial application of an IFRS that does not have a transition provision. The Board did not include any transition provision in the amendments because, in the Board's view, it would not be unduly burdensome for entities to apply the changes to IAS 12 retrospectively.
- BC34 The Board acknowledges that the amendments may add some administrative burden if they apply to investment property acquired in a business combination that occurred in a previous reporting period. For example, it could be difficult to restate goodwill and recalculate previous impairment reassessments if some information is not available and an entity is unable to separate the effects of hindsight. However, the Board reasoned that the amendments apply only to specific circumstances. Moreover, IAS 8 provides sufficient guidance to deal with cases when it might be impracticable to reassess impairment of goodwill or recoverability of deferred tax assets.
- BC35 Consequently, the Board concluded that the cost of requiring retrospective application is outweighed by the benefit of consistent application of the amendments by entities to all periods presented in the financial statements. Accordingly, the Board decided that entities should apply the amendments to IAS 12 retrospectively in accordance with IAS 8.

First-time adoption of IFRSs

- BC36 The Board identified no reason to adjust the exception for application by a first-time adopter at its date of transition to IFRSs.

Illustrative examples

These illustrative examples accompany, but are not part of, IAS 12.

Examples of temporary differences

A. Examples of circumstances that give rise to taxable temporary differences

All taxable temporary differences give rise to a deferred tax liability.

Transactions that affect profit or loss

- 1 Interest revenue is received in arrears and is included in accounting profit on a time apportionment basis but is included in taxable profit on a cash basis.
- 2 Revenue from the sale of goods is included in accounting profit when goods are delivered but is included in taxable profit when cash is collected. (*note: as explained in B3 below, there is also a **deductible** temporary difference associated with any related inventory*).
- 3 Depreciation of an asset is accelerated for tax purposes.
- 4 Development costs have been capitalised and will be amortised to the statement of comprehensive income but were deducted in determining taxable profit in the period in which they were incurred.
- 5 Prepaid expenses have already been deducted on a cash basis in determining the taxable profit of the current or previous periods.

Transactions that affect the statement of financial position

- 6 Depreciation of an asset is not deductible for tax purposes and no deduction will be available for tax purposes when the asset is sold or scrapped. (*note: paragraph 15(b) of the Standard prohibits recognition of the resulting deferred tax liability unless the asset was acquired in a business combination, see also paragraph 22 of the Standard*).
- 7 A borrower records a loan at the proceeds received (which equal the amount due at maturity), less transaction costs. Subsequently, the carrying amount of the loan is increased by amortisation of the transaction costs to accounting profit. The transaction costs were deducted for tax purposes in the period when the loan was first recognised. (*notes: (1) the taxable temporary difference is the amount of transaction costs already deducted in determining the taxable profit of current or prior periods, less the cumulative amount amortised to accounting profit; and (2) as the initial recognition of the loan affects taxable profit, the exception in paragraph 15(b) of the Standard does not apply. Therefore, the borrower recognises the deferred tax liability*).
- 8 A loan payable was measured on initial recognition at the amount of the net proceeds, net of transaction costs. The transaction costs are amortised to accounting profit over the life of the loan. Those transaction costs are not deductible in determining the taxable profit of future, current or prior periods. (*notes: (1) the taxable temporary difference is the amount of unamortised transaction costs; and (2) paragraph 15(b) of the Standard prohibits recognition of the resulting deferred tax liability*).
- 9 The liability component of a compound financial instrument (for example a convertible bond) is measured at a discount to the amount repayable on maturity (see IAS 32 *Financial Instruments: Presentation*). The discount is not deductible in determining taxable profit (tax loss).

Fair value adjustments and revaluations

- 10 Financial assets or investment property are carried at fair value which exceeds cost but no equivalent adjustment is made for tax purposes.

- 11 An entity revalues property, plant and equipment (under the revaluation model treatment in IAS 16 *Property, Plant and Equipment*) but no equivalent adjustment is made for tax purposes. (note: paragraph 61A of the Standard requires the related deferred tax to be recognised in other comprehensive income).

Business combinations and consolidation

- 12 The carrying amount of an asset is increased to fair value in a business combination and no equivalent adjustment is made for tax purposes. (Note that on initial recognition, the resulting deferred tax liability increases goodwill or decreases the amount of any bargain purchase gain recognised. See paragraph 66 of the Standard).
- 13 Reductions in the carrying amount of goodwill are not deductible in determining taxable profit and the cost of the goodwill would not be deductible on disposal of the business. (Note that paragraph 15(a) of the Standard prohibits recognition of the resulting deferred tax liability).
- 14 Unrealised losses resulting from intragroup transactions are eliminated by inclusion in the carrying amount of inventory or property, plant and equipment.
- 15 Retained earnings of subsidiaries, branches, associates and joint ventures are included in consolidated retained earnings, but income taxes will be payable if the profits are distributed to the reporting parent. (note: paragraph 39 of the Standard prohibits recognition of the resulting deferred tax liability if the parent, investor or venturer is able to control the timing of the reversal of the temporary difference and it is probable that the temporary difference will not reverse in the foreseeable future).
- 16 Investments in foreign subsidiaries, branches or associates or interests in foreign joint ventures are affected by changes in foreign exchange rates. (notes: (1) there may be either a taxable temporary difference or a deductible temporary difference; and (2) paragraph 39 of the Standard prohibits recognition of the resulting deferred tax liability if the parent, investor or venturer is able to control the timing of the reversal of the temporary difference and it is probable that the temporary difference will not reverse in the foreseeable future).
- 17 The non-monetary assets and liabilities of an entity are measured in its functional currency but the taxable profit or tax loss is determined in a different currency. (notes: (1) there may be either a taxable temporary difference or a deductible temporary difference; (2) where there is a taxable temporary difference, the resulting deferred tax liability is recognised (paragraph 41 of the Standard); and (3) the deferred tax is recognised in profit or loss, see paragraph 58 of the Standard).

Hyperinflation

- 18 Non-monetary assets are restated in terms of the measuring unit current at the end of the reporting period (see IAS 29 *Financial Reporting in Hyperinflationary Economies*) and no equivalent adjustment is made for tax purposes. (notes: (1) the deferred tax is recognised in profit or loss; and (2) if, in addition to the restatement, the non-monetary assets are also revalued, the deferred tax relating to the revaluation is recognised in other comprehensive income and the deferred tax relating to the restatement is recognised in profit or loss).

B. Examples of circumstances that give rise to deductible temporary differences

All deductible temporary differences give rise to a deferred tax asset. However, some deferred tax assets may not satisfy the recognition criteria in paragraph 24 of the Standard.

Transactions that affect profit or loss

- 1 Retirement benefit costs are deducted in determining accounting profit as service is provided by the employee, but are not deducted in determining taxable profit until the entity pays either retirement benefits or contributions to a fund. (note: similar deductible temporary differences arise where other expenses, such as product warranty costs or interest, are deductible on a cash basis in determining taxable profit).
- 2 Accumulated depreciation of an asset in the financial statements is greater than the cumulative depreciation allowed up to the end of the reporting period for tax purposes.

- 3 The cost of inventories sold before the end of the reporting period is deducted in determining accounting profit when goods or services are delivered but is deducted in determining taxable profit when cash is collected. *(note: as explained in A2 above, there is also a **taxable** temporary difference associated with the related trade receivable).*
- 4 The net realisable value of an item of inventory, or the recoverable amount of an item of property, plant or equipment, is less than the previous carrying amount and an entity therefore reduces the carrying amount of the asset, but that reduction is ignored for tax purposes until the asset is sold.
- 5 Research costs (or organisation or other start up costs) are recognised as an expense in determining accounting profit but are not permitted as a deduction in determining taxable profit until a later period.
- 6 Income is deferred in the statement of financial position but has already been included in taxable profit in current or prior periods.
- 7 A government grant which is included in the statement of financial position as deferred income will not be taxable in future periods. *(note: paragraph 24 of the Standard prohibits the recognition of the resulting deferred tax asset, see also paragraph 33 of the Standard).*

Fair value adjustments and revaluations

- 8 Financial assets or investment property are carried at fair value which is less than cost, but no equivalent adjustment is made for tax purposes.

Business combinations and consolidation

- 9 A liability is recognised at its fair value in a business combination, but none of the related expense is deducted in determining taxable profit until a later period. *(Note that the resulting deferred tax asset decreases goodwill or increases the amount of any bargain purchase gain recognised. See paragraph 66 of the Standard).*
- 10 [Deleted]
- 11 Unrealised profits resulting from intragroup transactions are eliminated from the carrying amount of assets, such as inventory or property, plant or equipment, but no equivalent adjustment is made for tax purposes.
- 12 Investments in foreign subsidiaries, branches or associates or interests in foreign joint ventures are affected by changes in foreign exchange rates. *(notes: (1) there may be a taxable temporary difference or a deductible temporary difference; and (2) paragraph 44 of the Standard requires recognition of the resulting deferred tax asset to the extent, and only to the extent, that it is probable that: (a) the temporary difference will reverse in the foreseeable future; and (b) taxable profit will be available against which the temporary difference can be utilised).*
- 13 The non-monetary assets and liabilities of an entity are measured in its functional currency but the taxable profit or tax loss is determined in a different currency. *(notes: (1) there may be either a taxable temporary difference or a deductible temporary difference; (2) where there is a deductible temporary difference, the resulting deferred tax asset is recognised to the extent that it is probable that sufficient taxable profit will be available (paragraph 41 of the Standard); and (3) the deferred tax is recognised in profit or loss, see paragraph 58 of the Standard.)*

C. Examples of circumstances where the carrying amount of an asset or liability is equal to its tax base

- 1 Accrued expenses have already been deducted in determining an entity's current tax liability for the current or earlier periods.
- 2 A loan payable is measured at the amount originally received and this amount is the same as the amount repayable on final maturity of the loan.
- 3 Accrued expenses will never be deductible for tax purposes.
- 4 Accrued income will never be taxable.

Illustrative computations and presentation

Extracts from statements of financial position and statements of comprehensive income are provided to show the effects on these financial statements of the transactions described below. These extracts do not necessarily conform with all the disclosure and presentation requirements of other Standards.

All the examples in this appendix assume that the entities concerned have no transaction other than those described.

Example 1 – Depreciable assets

An entity buys equipment for 10,000 and depreciates it on a straight-line basis over its expected useful life of five years. For tax purposes, the equipment is depreciated at 25% a year on a straight-line basis. Tax losses may be carried back against taxable profit of the previous five years. In year 0, the entity's taxable profit was 5,000. The tax rate is 40%.

The entity will recover the carrying amount of the equipment by using it to manufacture goods for resale. Therefore, the entity's current tax computation is as follows:

	Year				
	1	2	3	4	5
Taxable income	2,000	2,000	2,000	2,000	2,000
Depreciation for tax purposes	<u>2,500</u>	<u>2,500</u>	<u>2,500</u>	<u>2,500</u>	<u>0</u>
Taxable profit (tax loss)	<u>(500)</u>	<u>(500)</u>	<u>(500)</u>	<u>(500)</u>	<u>2,000</u>
Current tax expense (income) at 40%	<u>(200)</u>	<u>(200)</u>	<u>(200)</u>	<u>(200)</u>	<u>800</u>

The entity recognises a current tax asset at the end of years 1 to 4 because it recovers the benefit of the tax loss against the taxable profit of year 0.

The temporary differences associated with the equipment and the resulting deferred tax asset and liability and deferred tax expense and income are as follows:

	Year				
	1	2	3	4	5
Carrying amount	8,000	6,000	4,000	2,000	0
Tax base	<u>7,500</u>	<u>5,000</u>	<u>2,500</u>	<u>0</u>	<u>0</u>
Taxable temporary difference	<u>500</u>	<u>1,000</u>	<u>1,500</u>	<u>2,000</u>	<u>0</u>
Opening deferred tax liability	0	200	400	600	800
Deferred tax expense (income)	<u>200</u>	<u>200</u>	<u>200</u>	<u>200</u>	<u>(800)</u>
Closing deferred tax liability	<u>200</u>	<u>400</u>	<u>600</u>	<u>800</u>	<u>0</u>

The entity recognises the deferred tax liability in years 1 to 4 because the reversal of the taxable temporary difference will create taxable income in subsequent years. The entity's statement of comprehensive income includes the following:

	Year				
	1	2	3	4	5
Income	2,000	2,000	2,000	2,000	2,000
Depreciation	2,000	2,000	2,000	2,000	2,000
Profit before tax	<u>0</u>	<u>0</u>	<u>0</u>	<u>0</u>	<u>0</u>
Current tax expense (income)	(200)	(200)	(200)	(200)	800
Deferred tax expense (income)	<u>200</u>	<u>200</u>	<u>200</u>	<u>200</u>	<u>(800)</u>
Total tax expense (income)	<u>0</u>	<u>0</u>	<u>0</u>	<u>0</u>	<u>0</u>
Profit for the period	<u>0</u>	<u>0</u>	<u>0</u>	<u>0</u>	<u>0</u>

Example 2 – Deferred tax assets and liabilities

The example deals with an entity over the two year period, X5 and X6. In X5 the enacted income tax rate was 40% of taxable profit. In X6 the enacted income tax rate was 35% of taxable profit.

Charitable donations are recognised as an expense when they are paid and are not deductible for tax purposes.

In X5, the entity was notified by the relevant authorities that they intend to pursue an action against the entity with respect to sulphur emissions. Although as at December X6 the action had not yet come to court the entity recognised a liability of 700 in X5 being its best estimate of the fine arising from the action. Fines are not deductible for tax purposes.

In X2, the entity incurred 1,250 of costs in relation to the development of a new product. These costs were deducted for tax purposes in X2. For accounting purposes, the entity capitalised this expenditure and amortised it on the straight-line basis over five years. At 31/12/X4, the unamortised balance of these product development costs was 500.

In X5, the entity entered into an agreement with its existing employees to provide healthcare benefits to retirees. The entity recognises as an expense the cost of this plan as employees provide service. No payments to retirees were made for such benefits in X5 or X6. Healthcare costs are deductible for tax purposes when payments are made to retirees. The entity has determined that it is probable that taxable profit will be available against which any resulting deferred tax asset can be utilised.

Buildings are depreciated for accounting purposes at 5% a year on a straight-line basis and at 10% a year on a straight-line basis for tax purposes. Motor vehicles are depreciated for accounting purposes at 20% a year on a straight-line basis and at 25% a year on a straight-line basis for tax purposes. A full year's depreciation is charged for accounting purposes in the year that an asset is acquired.

At 1/1/X6, the building was revalued to 65,000 and the entity estimated that the remaining useful life of the building was 20 years from the date of the revaluation. The revaluation did not affect taxable profit in X6 and the taxation authorities did not adjust the tax base of the building to reflect the revaluation. In X6, the entity transferred 1,033 from revaluation surplus to retained earnings. This represents the difference of 1,590 between the actual depreciation on the building -3,250 and equivalent depreciation based on the cost of the building (1,660, which is the book value at 1/1/X6 of 33,200 divided by the remaining useful life of 20 years), less the related deferred tax of 557 (see paragraph 64 of the Standard).

Current tax expense

	X5	X6
Accounting profit	8,775	8,740
<i>Add</i>		
Depreciation for accounting purposes	4,800	8,250
Charitable donations	500	350
Fine for environmental pollution	700	–
Product development costs	250	250
Healthcare benefits	2,000	1,000
	17,025	18,590
<i>Deduct</i>		
Depreciation for tax purposes	(8,100)	(11,850)
Taxable Profit	<u>8,925</u>	<u>6,740</u>
Current tax expense at 40%	<u>3,570</u>	
Current tax expense at 35%		<u>2,359</u>

Carrying amounts of property, plant and equipment

<i>Cost</i>	<i>Building</i>	<i>Motor vehicles</i>	<i>Total</i>
Balance at 31/12/X4	50,000	10,000	60,000
Additions X5	6,000	–	6,000
Balance at 31/12/X5	56,000	10,000	66,000
Elimination of accumulated depreciation on revaluation at 1/1/X6	(22,800)	–	(22,800)
Revaluation at 1/1/X6	31,800	–	31,800
Balance at 1/1/X6	65,000	10,000	75,000
Additions X6	–	15,000	15,000
	<u>65,000</u>	<u>25,000</u>	<u>90,000</u>
 <i>Accumulated depreciation</i>	 5%	 20%

Deferred tax expense (income) related to the origination and reversal of temporary differences			<u>822</u>

Illustrative disclosure

The amounts to be disclosed in accordance with the Standard are as follows:

Major components of tax expense (income) (paragraph 79)

	X5	X6
Current tax expense	3,570	2,359
Deferred tax expense relating to the origination and reversal of temporary differences	420	822
Deferred tax expense (income) resulting from reduction in tax rate	–	(1,127)
Tax expense	<u>3,990</u>	<u>2,054</u>

Income tax relating to components of other comprehensive income (paragraph 81(ab))

Deferred tax relating to revaluation of building	<u>–</u>	<u>(11,130)</u>
--	----------	-----------------

In addition, deferred tax of 557 was transferred in X6 from retained earnings to surplus. This relates to the difference between the actual depreciation on the building and equivalent depreciation based on the cost of the building.

Explanation of the relationship between tax expense and accounting profit (paragraph 81(c))

The Standard permits two alternative methods of explaining the relationship between tax expense (income) and accounting profit. Both of these formats are illustrated below.

- (i) a numerical reconciliation between tax expense (income) and the product of accounting profit multiplied by the applicable tax rate(s), disclosing also the basis on which the applicable tax rate(s) is (are) computed

	X5	X6
Accounting profit	<u>8,775</u>	<u>8,740</u>
Tax at the applicable tax rate of 35% (X5: 40%)	3,510	3,059
Tax effect of expenses that are not deductible in determining taxable profit:		
Charitable donations	200	122
Fines for environmental pollution	280	–
Reduction in opening deferred taxes resulting from reduction in tax rate	<u>–</u>	<u>(1,127)</u>
Tax expense	<u>3,990</u>	<u>2,054</u>

The applicable tax rate is the aggregate of the national income tax rate of 30% (X5: 35%) and the local income tax rate of 5%.

- (ii) a numerical reconciliation between the average effective tax rate and the applicable tax rate, disclosing also the basis on which the applicable tax rate is computed

	X5	X6
	%	%
Applicable tax rate	40.0	35.0
Tax effect of expenses that are not deductible for tax purposes:		
Charitable donations	2.3	1.4
Fines for environmental pollution	3.2	–
Effect on opening deferred taxes of reduction in tax rate	–	(12.9)
Average effective tax rate (tax expense divided by profit before tax)	<u>45.5</u>	<u>23.5</u>

The applicable tax rate is the aggregate of the national income tax rate of 30% (X5: 35%) and the local income tax rate of 5%.

An explanation of changes in the applicable tax rate(s) compared to the previous accounting period (paragraph 81(d))

In X6, the government enacted a change in the national income tax rate from 35% to 30%.

In respect of each type of temporary difference, and in respect of each type of unused tax losses and unused tax credits:

- (i) **the amount of the deferred tax assets and liabilities recognised in the statement of financial position for each period presented;**
- (ii) **the amount of the deferred tax income or expense recognised in profit or loss for each period presented, if this is not apparent from the changes in the amounts recognised in the statement of financial position (paragraph 81(g))**

	X5	X6
Accelerated depreciation for tax purposes	9,720	10,322
Liabilities for healthcare benefits that are deducted for tax purposes only when paid	(800)	(1,050)
Product development costs deducted from taxable profit in earlier years	100	–
Revaluation, net of related depreciation	–	10,573
Deferred tax liability	<u>9,020</u>	<u>19,845</u>

(note: the amount of the deferred tax income or expense recognised in profit or loss for the current year is apparent from the changes in the amounts recognised in the statement of financial position)

Example 3 – Business combinations

On 1 January X5 entity A acquired 100 per cent of the shares of entity B at a cost of 600. At the acquisition date, the tax base in A's tax jurisdiction of A's investment in B is 600. Reductions in the carrying amount of goodwill are not deductible for tax purposes, and the cost of the goodwill would also not be deductible if B were to dispose of its underlying business. The tax rate in A's tax jurisdiction is 30 per cent and the tax rate in B's tax jurisdiction is 40 per cent.

The fair value of the identifiable assets acquired and liabilities assumed (excluding deferred tax assets and liabilities) by A is set out in the following table, together with their tax bases in B's tax jurisdiction and the resulting temporary differences.

	<i>Amounts recognised at acquisition</i>	<i>Tax base</i>	<i>Temporary differences</i>
Property, plant and equipment	270	155	115
Accounts receivable	210	210	–
Inventory	174	124	50
Retirement benefit obligations	(30)	–	(30)
Accounts payable	(120)	(120)	–
Identifiable assets acquired and liabilities assumed, excluding deferred tax	<u>504</u>	<u>369</u>	<u>135</u>

The deferred tax asset arising from the retirement benefit obligations is offset against the deferred tax liabilities arising from the property, plant and equipment and inventory (see paragraph 74 of the Standard).

No deduction is available in B's tax jurisdiction for the cost of the goodwill. Therefore, the tax base of the goodwill in B's jurisdiction is nil. However, in accordance with paragraph 15(a) of the Standard, A recognises no deferred tax liability for the taxable temporary difference associated with the goodwill in B's tax jurisdiction.

The carrying amount, in A's consolidated financial statements, of its investment in B is made up as follows:

Fair value of identifiable assets acquired and liabilities assumed, excluding deferred tax	504
Deferred tax liability (135 at 40%)	<u>(54)</u>
Fair value of identifiable assets acquired and liabilities assumed	450
Goodwill	<u>150</u>
Carrying amount	<u>600</u>

Because, at the acquisition date, the tax base in A's tax jurisdiction, of A's investment in B is 600, no temporary difference is associated in A's tax jurisdiction with the investment.

During X5, B's equity (incorporating the fair value adjustments made as a result of the business combination) changed as follows:

At 1 January X5	450
Retained profit for X5 (net profit of 150, less dividend payable of 80)	<u>70</u>
At 31 December X5	<u>520</u>

A recognises a liability for any withholding tax or other taxes that it will incur on the accrued dividend receivable of 80.

At 31 December X5, the carrying amount of A's underlying investment in B, excluding the accrued dividend receivable, is as follows:

Net assets of B	520
Goodwill	150
Carrying amount	670

The temporary difference associated with A's underlying investment is 70. This amount is equal to the cumulative retained profit since the acquisition date.

If A has determined that it will not sell the investment in the foreseeable future and that B will not distribute its retained profits in the foreseeable future, no deferred tax liability is recognised in relation to A's investment in B (see paragraphs 39 and 40 of the Standard). Note that this exception would apply for an investment in an associate only if there is an agreement requiring that the profits of the associate will not be distributed in the foreseeable future (see paragraph 42 of the Standard). A discloses the amount of the temporary difference for which no deferred tax is recognised, ie 70 (see paragraph 81(f) of the Standard).

If A expects to sell the investment in B, or that B will distribute its retained profits in the foreseeable future, A recognises a deferred tax liability to the extent that the temporary difference is expected to reverse. The tax rate reflects the manner in which A expects to recover the carrying amount of its investment (see paragraph 51 of the Standard). A recognises the deferred tax in other comprehensive income to the extent that the deferred tax results from foreign exchange translation differences that have been recognised in other comprehensive income (paragraph 61A of the Standard). A discloses separately:

- (a) the amount of deferred tax that has been recognised in other comprehensive income (paragraph 81(ab) of the Standard); and
- (b) the amount of any remaining temporary difference which is not expected to reverse in the foreseeable future and for which, therefore, no deferred tax is recognised (see paragraph 81(f) of the Standard).

Example 4 – Compound financial instruments

An entity receives a non-interest-bearing convertible loan of 1,000 on 31 December X4 repayable at par on 1 January X8. In accordance with IAS 32 *Financial Instruments: Presentation* the entity classifies the instrument's liability component as a liability and the equity component as equity. The entity assigns an initial carrying amount of 751 to the liability component of the convertible loan and 249 to the equity component. Subsequently, the entity recognises imputed discount as interest expense at an annual rate of 10% on the carrying amount of the liability component at the beginning of the year. The tax authorities do not allow the entity to claim any deduction for the imputed discount on the liability component of the convertible loan. The tax rate is 40%.

The temporary differences associated with the liability component and the resulting deferred tax liability and deferred tax expense and income are as follows:

	<i>Year</i>			
	X4	X5	X6	X7
Carrying amount of liability component	751	826	909	1,000
Tax base	1,000	1,000	1,000	1,000
Taxable temporary difference	249	174	91	–
Opening deferred tax liability at 40%	0	100	70	37
Deferred tax charged to equity	100	–	–	–
Deferred tax expense (income)	–	(30)	(33)	(37)
Closing deferred tax liability at 40%	100	70	37	–

As explained in paragraph 23 of the Standard, at 31 December X4, the entity recognises the resulting deferred tax liability by adjusting the initial carrying amount of the equity component of the convertible liability. Therefore, the amounts recognised at that date are as follows:

Liability component	751
Deferred tax liability	100
Equity component (249 less 100)	149
	1,000
	1,000

Subsequent changes in the deferred tax liability are recognised in profit or loss as tax income (see paragraph 23 of the Standard). Therefore, the entity's profit or loss includes the following:

	<i>Year</i>			
	<i>X4</i>	<i>X5</i>	<i>X6</i>	<i>X7</i>
Interest expense (imputed discount)	–	75	83	91
Deferred tax expense (income)	–	(30)	(33)	(37)
	–	45	50	54

Example 5 – Share-based payment transactions

In accordance with IFRS 2 *Share-based Payment*, an entity has recognised an expense for the consumption of employee services received as consideration for share options granted. A tax deduction will not arise until the options are exercised, and the deduction is based on the options' intrinsic value at exercise date.

As explained in paragraph 68B of the Standard, the difference between the tax base of the employee services received to date (being the amount the taxation authorities will permit as a deduction in future periods in respect of those services), and the carrying amount of nil, is a deductible temporary difference that results in a deferred tax asset. Paragraph 68B requires that, if the amount the taxation authorities will permit as a deduction in future periods is not known at the end of the period, it should be estimated, based on information available at the end of the period. If the amount that the taxation authorities will permit as a deduction in future periods is dependent upon the entity's share price at a future date, the measurement of the deductible temporary difference should be based on the entity's share price at the end of the period. Therefore, in this example, the estimated future tax deduction (and hence the measurement of the deferred tax asset) should be based on the options' intrinsic value at the end of the period.

As explained in paragraph 68C of the Standard, if the tax deduction (or estimated future tax deduction) exceeds the amount of the related cumulative remuneration expense, this indicates that the tax deduction relates not only to remuneration expense but also to an equity item. In this situation, paragraph 68C requires that the excess of the associated current or deferred tax should be recognised directly in equity.

The entity's tax rate is 40 per cent. The options were granted at the start of year 1, vested at the end of year 3 and were exercised at the end of year 5. Details of the expense recognised for employee services received and consumed in each accounting period, the number of options outstanding at each year-end, and the intrinsic value of the options at each year-end, are as follows:

	Employee services expense	Number of options at year-end	Intrinsic value per option
Year 1	188,000	50,000	5
Year 2	185,000	45,000	8
Year 3	190,000	40,000	13
Year 4	0	40,000	17
Year 5	0	40,000	20

The entity recognises a deferred tax asset and deferred tax income in years 1–4 and current tax income in year 5 as follows. In years 4 and 5, some of the deferred and current tax income is recognised directly in equity, because the estimated (and actual) tax deduction exceeds the cumulative remuneration expense.

Year 1

Deferred tax asset and deferred tax income:

$(50,000 \times 5 \times \frac{1}{3} \times 0.40) =$	33,333
--	--------

- (a) The tax base of the employee services received is based on the intrinsic value of the options, and those options were granted for three years' services. Because only one year's services have been received to date, it is necessary to multiply the option's intrinsic value by one-third to arrive at the tax base of the employee services received in year 1.

The deferred tax income is all recognised in profit or loss, because the estimated future tax deduction of 83,333 ($50,000 \times 5 \times \frac{1}{3}$) is less than the cumulative remuneration expense of 188,000.

Year 2

Deferred tax asset at year-end:

$(45,000 \times 8 \times \frac{2}{3} \times 0.40) =$	96,000	
Less deferred tax asset at start of year	(33,333)	
Deferred tax income for year		62,667 *

* This amount consists of the following:

Deferred tax income for the temporary difference between the tax base of the employee services received during the year and their carrying amount of nil:

$(45,000 \times 8 \times \frac{1}{3} \times 0.40)$	48,000
--	--------

Tax income resulting from an adjustment to the tax base of employee services received in previous years:

(a) increase in intrinsic value: $(45,000 \times 3 \times \frac{1}{3} \times 0.40)$	18,000
(b) decrease in number of options: $(5,000 \times 5 \times \frac{1}{3} \times 0.40)$	(3,333)

Deferred tax income for year	62,667
------------------------------	--------

The deferred tax income is all recognised in profit or loss, because the estimated future tax deduction of 240,000 ($45,000 \times 8 \times \frac{2}{3}$) is less than the cumulative remuneration expense of 373,000 (188,000 + 185,000).

Year 3

Deferred tax asset at year-end:

$(40,000 \times 13 \times 0.40) =$	208,000
Less deferred tax asset at start of year	(96,000)
Deferred tax income for year	112,000

The deferred tax income is all recognised in profit or loss, because the estimated future tax deduction of 520,000 ($40,000 \times 13$) is less than the cumulative remuneration expense of 563,000 (188,000 + 185,000 + 190,000).

Year 4

Deferred tax asset at year-end:

(40,000 × 17 × 0.40) =	272,000	
Less deferred tax asset at start of year	(208,000)	
Deferred tax income for year		<u>64,000</u>

The deferred tax income is recognised partly in profit or loss and partly directly in equity as follows:

Estimated future tax deduction (40,000 × 17) =	680,000	
Cumulative remuneration expense	563,000	
Excess tax deduction		<u>117,000</u>
Deferred tax income for year	64,000	
Excess recognised directly in equity (117,000 × 0.40) =	46,800	
Recognised in profit or loss		<u>17,200</u>

Year 5

Deferred tax expense (reversal of deferred tax asset)	272,000	
Amount recognised directly in equity (reversal of cumulative deferred tax income recognised directly in equity)	46,800	
Amount recognised in profit or loss		<u>225,200</u>
Current tax income based on intrinsic value of options at exercise date (40,000 × 20 × 0.40) =	320,000	
Amount recognised in profit or loss (563,000 × 0.40) =	225,200	
Amount recognised directly in equity		<u>94,800</u>

Summary

	Statement of comprehensive income			Statement of financial position		
	Employee services expense	Current tax expense (income)	Deferred tax expense (income)	Total tax expense (income)	Equity	Deferred tax asset
Year 1	188,000	0	(33,333)	(33,333)	0	33,333
Year 2	185,000	0	(62,667)	(62,667)	0	96,000
Year 3	190,000	0	(112,000)	(112,000)	0	208,000
Year 4	0	0	(17,200)	(17,200)	(46,800)	272,000
Year 5	0	(225,200)	225,200	0	46,800	0
					(94,800)	
Totals	563,000	(225,200)	0	(225,200)	(94,800)	0

Example 6 – Replacement awards in a business combination

On 1 January 20X1 Entity A acquired 100 per cent of Entity B. Entity A pays cash consideration of CU400 to the former owners of Entity B.

At the acquisition date Entity B had outstanding employee share options with a market-based measure of CU100. The share options were fully vested. As part of the business combination Entity B's outstanding share options are replaced by share options of Entity A (replacement awards) with a market-based measure of CU100 and an intrinsic value of CU80. The replacement awards are fully vested. In accordance with paragraphs B56-B62 of IFRS 3 Business Combinations (as revised in 2008), the replacement awards are part of the consideration transferred for Entity B. A tax deduction for the replacement awards will not arise until the options are exercised. The tax deduction will be based on the share options' intrinsic value at that date. Entity A's tax rate is 40 per cent. Entity A recognises a deferred tax asset of CU32 (CU80 intrinsic value x 40%) on the replacement awards at the acquisition date.

Entity A measures the identifiable net assets obtained in the business combination (excluding deferred tax assets and liabilities) at CU450. The tax base of the identifiable net assets obtained is CU300. Entity A recognises a deferred tax liability of CU60 ((CU450 – CU300) x 40%) on the identifiable net assets at the acquisition date.

Goodwill is calculated as follows:

	CU
Cash consideration	400
Market-based measure of replacement awards	100
Total consideration transferred	500
Identifiable net assets, excluding deferred tax assets and liabilities	(450)
Deferred tax asset	(32)
Deferred tax liability	60
Goodwill	78

Reductions in the carrying amount of goodwill are not deductible for tax purposes. In accordance with paragraph 15(a) of the Standard, Entity A recognises no deferred tax liability for the taxable temporary difference associated with the goodwill recognised in the business combination.

The accounting entry for the business combination is as follows:

	CU	CU
Dr Goodwill	78	
Dr Identifiable net assets	450	
Dr Deferred tax asset	32	
Cr Cash		400
Cr Equity (replacement awards)		100
Cr Deferred tax liability		60

On 31 December 20X1 the intrinsic value of the replacement awards is CU120. Entity A recognises a deferred tax asset of CU48 (CU120 x 40%). Entity A recognises deferred tax income of CU16 (CU48 – CU32) from the increase in the intrinsic value of the replacement awards. The accounting entry is as follows:

	CU	CU
Dr Deferred tax asset	16	
Cr Deferred tax income		16

If the replacement awards had not been tax-deductible under current tax law, Entity A would not have recognised a deferred tax asset on the acquisition date. Entity A would have accounted for any subsequent events that result in a tax deduction related to the replacement award in the deferred tax income or expense of the period in which the subsequent event occurred.

Paragraphs B56-B62 of IFRS 3 provide guidance on determining which portion of a replacement award is part of the consideration transferred in a business combination and which portion is attributable to future service and thus a post-combination remuneration expense. Deferred tax assets and liabilities on replacement awards that are post-combination expenses are accounted for in accordance with the general principles as illustrated in Example 5.
